

IMPROVING STANDARDS IN YOUR SECTOR

INGREDIENTS

At risk of contamination from a number of sources, the production of ingredients needs to be carried out in facilities with the highest standards of hygiene and cleanliness.

During processing, hazards include the presence of mould and the risk of cross-contamination. With the incidence of food allergies rising, strict controls surrounding the separation of ingredients are imperative and appropriate storage and handling is essential.

Environmental factors contribute to the challenges faced in this sector, such as humidity, which supports the development of biofilm.

Rigorous cleaning processes must be implemented and adhered to, covering work surfaces, floors, utensils, processing equipment and pipework. Incomplete removal of organic residues can support the growth of microbes.
